

Luke Epp

DATA SCIENCE · QUANT · SOFTWARE DEVELOPER

(+1) 303-261-7475

|

leppster13@gmail.com

Summary

With a bachelor's degree in Statistics and **over three years of experience in various data roles**, I pride myself on my ability to pioneer and adopt scalable systems to accomplish difficult tasks in the data space regularly. I have worked with **Python and R extensively in their respective data libraries**, and I am comfortable with Git, Bash, Kubernetes, Docker, C#, and JavaScript (especially React). I am eager to take on responsibility and prove myself as a **skilled and valuable team member**.

Experience

cQuant

Golden, CO

ENERGY ANALYST & QUANTITATIVE DEVELOPER

Feb 2023–Present

- Developed and deployed 4 models of my own to our production code base.
- Created an automated training orchestrator as part of a machine learning project to speed up our model runs.
- Created a powerful automated utility for testing model runs with different parameters.
- Closed over 180 Gitlab issues in our codebase, with a close eye on style guidelines, testing, and efficiency.
- Mentored & onboarded 3 junior analysts.
- Led technical implementations for multi-billion dollar companies.
- Trained dozens of users how to use our software.
- Presented results of technical implementations to executives for some of the largest energy companies in the world.

Movement Golden

Golden, CO

CLIMBING COACH & ROUTE-SETTER

June 2021–Feb 2023

- Coached the competitive youth climbing team at Movement Golden, a climbing gym
- Gave and received feedback daily to ensure the route-setting team and I are producing quality work.

Avrio Analytics

Golden, CO

DATA SCIENTIST

July 2020–June 2021

- Interacted with clients daily with an emphasis on professionalism and delivering high-quality results
- Created and helped hone a federal defense client's employee churn model. I was responsible for data cleaning, feature engineering, parameter tuning, and choosing the correct model.
- Built a data pipeline in Python to handle over 7 TB of data. Later vectorized and parallelized the pipeline to speed it up by two orders of magnitude. Completed quality assurance checks with Postgres and communicated with domain experts to ensure quality and validity.
- Helped create a dashboard with R Shiny and a random forest model for a federal defense client to predict field readiness
- Created multiple dashboards using Node and React, as well as Dash and Plotly, deploying them with Docker and Kubernetes.
- Engaged in fast-paced consulting work with a commitment to quality and timeliness for clients using Git and Asana

Avrio Analytics

Golden, CO

DATA SCIENCE INTERN

May 2019–July 2019

- Refined a Python web application using AWS, MySQL, SQLAlchemy, Pytorch, Github, and Sklearn to create models with customer data to aid brewery sales.

Colorado School of Mines Mathematics Department

Golden, CO

TUTOR & TEACHING ASSISTANT

August 2018–May 2019

- Helped my peers through problems in the Mathematics Curriculum in a friendly and professional manner
- Graded papers for both Linear Algebra and Probability and Statistics with a commitment to correctness and timeliness.

Colorado School of Mines Residence Life

Golden, CO

RESIDENT ASSISTANT

August 2018–May 2019

- Served as a role model, authority figure, responsible party, and trustworthy friend to first-year students in the college dorms.

Projects

United Nations Open Source for Good Hackathon

1ST PLACE

July 8 , 2024

- Created a a web application in flask powered by OpenAI to predict water usage of consumer goods.
- Presented the project to hundreds of people at the Open Source for Good Conference in New York City.
- Won first place out of approximately 15 teams.

NREL Solar Data Hackathon 2018

1ST PLACE

November 10, 2018

- Created a model in Python with a team of three that paired solar panel data with solar irradiance data. Used income distribution data to make conclusions about which schools in Colorado could benefit the most from solar energy programs from the state government.
- Won first place out of approximately 20 teams.

Henderson Sustainability Challenge 2018

1ST PLACE

August–December 2018

- Made the best plan to repurpose the Henderson Molybdenum Mine, by conducting research, case studies, and interviews, then we constructed a rigorous report, and presented our findings
- Won first place out of approximately 50 teams.

Center-to-Limb Variability of Hot Coronal EUV Emissions During Solar Flares

RESEARCH ASSISTANT

January 2017–July 2017

- Used solar physics models and satellite data to model the effect of solar disc position on solar flare intensity in the EUV spectrum of light.

Education

Colorado School of Mines

1500 Illinois St., Golden, CO 80401

B.S. IN STATISTICS (With Honors)

2017–2020
